
Status Report Overview 1: 30.09.2016

Completed:

- AppleTV development setup is successfully done
- Kick-off meeting with FHNW coaches (27.09.2016)

Ongoing: (next 2 weeks)

- Rough project planning
- Researches regarding TVML, general app development and streaming implementation for appleTV
- We will send you in the next 2-3 weeks the detailed information regarding the scope of the project (which has to be signed)

Problems:

- Lacking detail background information of Horizon(-go)
- Open questions

Scheduled:

-

Open Questions/Requests:

The following open question are very important for us to get started as efficiently as possible

1. Mister Keller already gave us the document Orion end-to-end architecture document. Does a newer version exist? Because ours has been renewed the last time in 2013. And could you please send this to us?
2. We would like to have the developer guide for Horizon and HorizonGo or some technical background information and, if possible, some contact data from the developers.
3. We were wondering why scrolling through the UI from Horizon is sometimes not very smooth. It would be important to know the reason for this issue in order to develop the application as smooth as possible.
4. Regarding the requirement for accessing customer information we want to ask which interface is responsible and how we can access it?

Comments:

- If you have any questions or request don't hesitate to contact us at any time
